PRODUCT DESCRIPTION

The OPN-S8F13-1SC2I series multi-mode transceivers are low power, high performance module for bi-directional serial optical data communications such as ATM 622 Mb/s, FastEthernet and Fibre Channel. This module is designed for multi-mode fiber and operates at a nominal wavelength of 1310 nm. The transmitter section uses a multiple quantumwell laser and is a class 1 laser compliant according to International Safety Standard IEC-60825. The receiver section uses an integrated GaAs detector preamplifier (IDP) mounted in an optical header and a limiting post-amplifierIC. A PECL logic interface simplifies interface to externalcircuitry.

The split-load terminations for ECL signals need to be located at the input of devices receiving those ECL signals. The power supply filtering is required for good EMI performance. Use short tracks from the inductor L1/L2 to the module Rx Vcc and Tx Vcc. A GND plane under the module is required for good EMI and sensitivity performance.
